

Wynna's Hangman Game

This hangman game has been written in python by Wynna Huang. My hangman game is a word game, where there are four to eight given blanks, depending on the level. To start, the player goes to python IDLE, click on "Run" at the top of the screen, and select "Run Module" in order to run the entire game. Level one presents the player with a four letter word, level two has a six letter word, and level three has an eight letter word. The player simply has to guess the letters that belong in the corresponding blanks in the levels. The player is only allowed to get 5 letters wrong, because on the sixth wrong guess, the player will have to start the game again.
